

OPTIMISATION OF SERVICE PHONE NUMBERS

STEP 1

EVALUATION

On the basis of your last phone bill, we evaluate free of cost to what extent and in which areas cost savings and/or margin optimisations would be possible.

This non-committal evaluation already takes into care your individual demands and needs. Based on the result, you can decide if you want to use our service.

STEP 2

CHECK

If you decide in favour of our company and our services, our experts exactly check which providers, prefix ranges and tariffs are the most suitable and most cost-effective for you.

As telequest is not indebted to a provider, but is able to act completely independently, this check takes place only on the basis of objective parameters. We give you a detailed and clear statement which shows you the future cost-saving potential. Additionally, we also check free of cost and non-committally if your service applies to all legal and regulatory provisions of the countries in question.

STEP 3

IMPLEMENTATION

The further implementation – such as porting of the existing or set-up of the new phone number, tariff change and other necessary steps – we take over for you.
